

Cristal

EFFICIENCY

Comfortable, secure and fully accessible for people with reduced mobility

Modularity and short radius

ECONOMICAL

Low maintenance cost

Low operational cost due to the modularity

ECOLOGICAL

zero CO₂ and GHG emissions

Quiet and 100% electric vehicle

With its range of Cristal and i-Cristal vehicles, Lohr meets the mobility needs of local communities, with or without a driver. These transport solutions can be used in new 100% Cristal or i-Cristal lines or supplement existing networks by offering multiple uses: public transport or on-demand services. Designed and developed for MaaS (Mobility as a Service) solutions, Cristal and i-Cristal are complementary to mass transit systems and can be operated intermodally.

NEW MOBILITIES

100% electric, ecological and sustainable : Cristal, is a new way of shared mobility.

Cristal is designed to offer the operators a modular public transport mobility solution.

100% electric, Cristal offers an easy-to-use & comfortable shared mobility experience, accessible to all, everywhere.

Designed with a «public transport» approach in mind, the Cristal system has a variety of uses as a linking shuttle service, or replacing buses on pre-existing lines.

Cristal solution constantly adapts to the number of passengers (1 to 4 shuttles coupled).

Same length and width as a city car, but with standing, pavement-level access

SPECIFICATIONS

- Automated hitching system allowing a single-lane trajectory and a small turning radius,
- Safety: limited space between each shuttle module,
- On-board battery has enough power to run all day,
- Fast charging time: 100% in 2 H min, 50% in 45 min,
- Max incline: 20%,
- Range: 120 km,
- Max speed: 50 km/h,
- Automatic electric ramp for PRM access.

MODULARITY

- **Hitching:** Coupling and uncoupling operation in less than a minute
- **Modularity:**
 - 14 passengers (Solo mode)
 - 28 passengers (Solo mode)
 - 42 passengers (Shuttle mode)
 - 56 passengers (Shuttle mode)
